Unity of Invention

35 U.S.C. § 371

1. This application was filed under 35 U.S.C. § 371 and is subject to unity of invention practice pursuant to 35 U.S.C. § 121 and 372. The regulations governing the claiming of different inventions in one national application are set forth under 37 C.F.R. § 1.141, 1.475, and 1.499. Applicants are reminded that if multiple products, processes of manufacture, or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each of the other categories related thereto, will be considered as the main invention in the claims (refer to PCT Article 17(3)(a) and § 1.476(c)). The novelty of the instant invention appears to be directed towards a non-cytolytic recombinant human immunodeficiency virus wherein the natural signal sequence (NSS) has been modified or replaced. Should applicants elect to prosecute this invention, a single method of use (e.g., the prevention of retroviral transmission) would also be included for examination. However, the remaining groups do not share a special technical feature with Group I as set forth below.

2. In accordance with 37 C.F.R. § 1.499, applicants are required, in response to this action, to elect a single invention to which the claims must be restricted.

a. Group I, claim(s) 1-21, drawn to a **non-cytolytic recombinant human immunodeficiency virus** wherein the natural signal sequence (NSS) has been modified or replaced and attendant method of use.

b. Group II, claim(s) 22-25, drawn to a **method of killing a target cell** by administering a **recombinant virus** carrying the HIV-1 NSS sequence.

c. Group III, claim(s) 26-28, drawn to a method of inhibiting apoptosis induced by an HIV-1 NSS by administering an antagonist.

5 d. Group IV, claim(s) 29 and 30, drawn to a method of inhibiting the effects of an HIV-1 NSS through the administration of an antisense oligonucleotide.

10 The inventions listed as Groups I-IV do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features. Each of the identified groups is directed toward a different scientific objective (i.e., method of preventing retroviral infection, killing a target cell, inhibiting apoptosis, or
15 inhibiting NSS activity) that employs different scientific reagents and methodologies. Accordingly, there is no special technical feature present in the claims.

37 C.F.R. § 1.48(b)

20 3. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. §
25 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
